ORIGINAL MACHINE NAME:	ACMHW-MSFC-1
BASE H/W CONFIGURATION:	SPARC 20/50 with 64 MB and 4 GB disk
HW ADDITIONS:	Add an additional 32 MB simm from Craig Johnson's loaner pool for a total of 96 MB memory
LOCATION:	See Page 3 (attached)
VCATS NAME:	ACMMSFC3
PROPOSED EDF HOSTNAME:	msfcsun3
DCE CELL:	relbdev
OPERATING SYSTEM:	Solaris 2.4
OTHER SOFTWARE:	

"New" versions of SparcWorks, compilers and development tools. These are newer than are used on the Rel A baseline, but have been released for months and are certified for Solaris 2.4. VCATS shows that only C++ and C compilers were purchased for this machine, so SPARCworks and iMPact will either have to be shared from our main license server or be borrowed from another machine to be locally loaded. My recommendation is that begin to float these licenses now, since there are many Rel B machines that will also be requiring these new versions. If flexlm cares, we could float a portion of these tools for the old revs and a portion for the new revs.
• SPARCworks 3.1;   SPARCompiler C++ 4.1;   SPARCompiler C 4.0;   iMPact 3.0
• Clear Case Client
• DCE 1.1 App Dev Kit (we recently bought 34 of these at 1.03, and they should be "upgradeable" to 1.1). NOTE that there is no longer a floating license manager for these at version 1.1 !!!
• DCE 1.1 client (1.03 bought with machine, upgradeable to 1.1)

ORIGINAL MACHINE NAME:	DRPHW-MSFC-1
BASE H/W CONFIGURATION:	SGI Challenge DM with 256 MB and 6 GB disk
HW ADDITIONS:	none
LOCATION:	See Page 3 (attached)
VCATS NAME:	DRPHW-MSFC-1
PROPOSED EDF HOSTNAME:	msfcsgi3
DCE CELL:	idgcell
OPERATING SYSTEM:	IRIX 5.3
OTHER SOFTWARE:	

Though there are baselined Rel A versions for the SGI supplied compilers, we would like to be sure that we have the latest available versions for IRIX 5.3. We believe that the versions shown below are the newest versions, but if newer ones are found to be available, load these instead.
   • Delta 4 C++ Compiler 4.0; C Compiler 3.19 (part of IRIX development option 5.3)

- CaseVision (aka ProDev Workshop, etc) version 2.4 - was not purchased for this machine; Craig Johnson says we can access this from netls floating licenses.
- KAI C++ compiler 2.05b- This is the exception handling C++ compiler from Kluck and Associates. We recently bought about eight of these.

- Clear Case client
- DCE 1.1 App Dev Kit - We recently bought five licenses for version 1.03. If there is a 1.1 version available, our 1.03 license can be upgraded to this. See John Mangum if there are questions about the release of DCE 1.1 on SGI.
- DCE 1.1 client - Version 1.03 bought with this machine. I am told that there is a 1.1 beta, and that we can upgrade
